SPINEVISION-AI

AI-Assisted Spine Disease Detection Report

Report Generated: January 27, 2026 at 14:18
Requesting Physician: Zia ur Rahman

Overall Classification

Abnormal - High Confidence

Confidence: 74%

Detected Conditions

Condition	Probability	Severity
Degenerative Changes	74%	High
Osteophytes	53%	Moderate
Disc Space Narrowing	46%	Low
Vertebral Compression	22%	Very Low
Spondylolisthesis	16%	Very Low

Finding Descriptions

Degenerative Changes: Age-related wear and tear of spinal structures
Osteophytes: Bone spurs forming along vertebral edges

Region of Interest Visualization

The highlighted regions indicate areas where the AI model detected potential abnormalities. Warmer colors (red/orange) indicate higher attention from the model.

Recommendations

1. Immediate consultation with an orthopedic specialist or spine surgeon is recommended.
2. Additional imaging studies (MRI, CT) may be warranted for detailed assessment.
3. Clinical correlation with patient symptoms and physical examination is essential.
4. Consider referral for comprehensive spine evaluation.

Model Version: v0.1-dummy | **Analysis ID:** N/A

IMPORTANT DISCLAIMER: This report is generated by an AI-assisted diagnostic tool and is intended for clinical decision support only. It should not be used as the sole basis for diagnosis or treatment. All findings must be reviewed and confirmed by a qualified medical professional. The AI model's predictions are probabilistic in nature and may not capture all pathological conditions. Clinical correlation is mandatory.
